Android Application Example Github Search

Build a simple application which can be used to search for repositories on Github.

Requirements:

- Use Kotlin

- Single screen containing:

  - Input text field to search

  - List to display results

- Use the Github REST API https://api.github.com/

  - Implement pagination

- Click on a result entry should open the specific repository in the system browser

Provide your result using the version control system host of your choice and send the repository URL or an invite to ag@tailored-apps.com

Nice to haves:

- Tests

- Fancy/Material Design

- Clean architecture

- Detail screen of a repository

- Type-ahead search

- Comprehensible VCS history
